Manually look for
hot towers and append
the runs to **exclusion_list****

exclusion_list_*

asym_call_jets

- calls **Asym3.C** for three classes of events (sph, pi0, thr)
- then calls **DrawAsymmetries.C** which draws plots for asym vs. phi and vs. kinematic variables

asym_call [anything else]

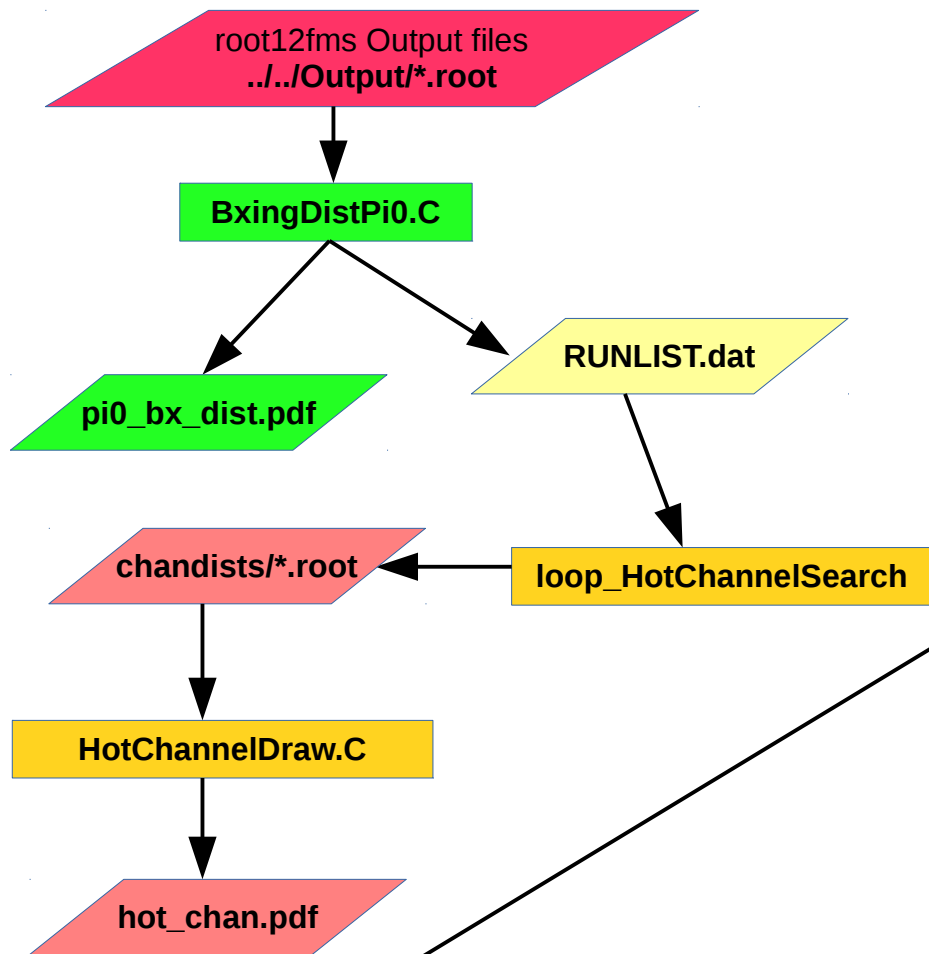

- diagnostic / consistency check scripts, which draw asymmetry plots for specific runs, fills, etc.

asymmetry plots
spin*.root
(asym_call_jets
moves it to \$outdir)

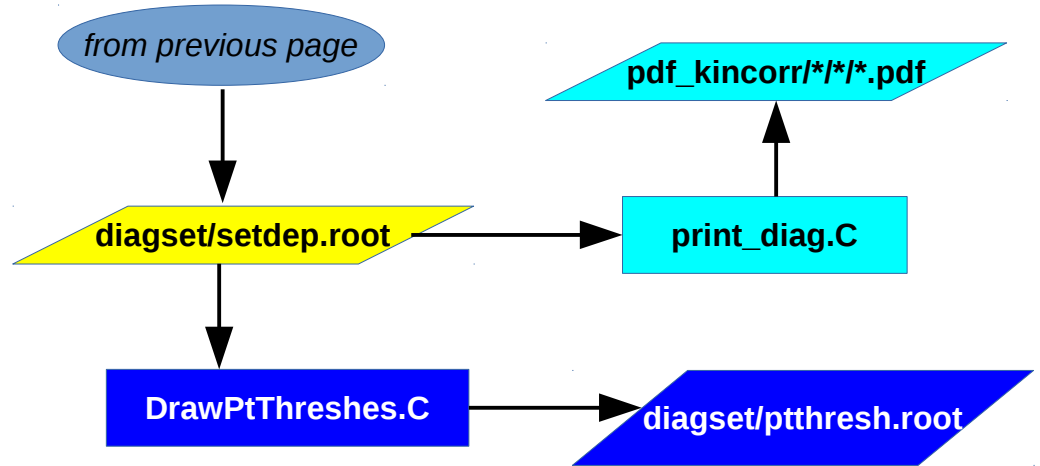

\$outdir/*.png
best viewed with
asym_plots/
asym_web.html

\$outdir/asymcanv*.root

Some Diagnostics...

Tracking run-dependent thresholds

Kinematic vs. Run plots
